

Delta prediction is regime-limited: published models fail outside dense within-source data

(a) Frozen- Δ performance vs data regime (n = 25 model-task rows)

Spearman $\rho = 0.70$ ($p = 1.0e-04$); Kendall $\tau = 0.52$

(b) Memorization (train-val gap) follows the same regime

polyA gap 0.03 (generalizes) vs MRL gap 0.79 (memorizes)
